Re: Sulfurdale Project

Gentlemen:

A review of our file on your project at Sulfurdale indicates that you have not responded to the Bureau of Water Pollution Control's letter dated March 21, 1986, wherein the Delano Development Corporation was requested to provide information concerning the containment ponds located west of Sulfurdale between old U.S. 91 and I-15 (copy enclosed).

It is our understanding that these ponds were unable to contain the flows during the 1986 spring runoff resulting in an unauthorized discharge and request that you respond to the March 21, 1986 letter in order that an evaluation can be made as to the adequacy of the ponds to prevent a discharge as well as evaluate the potential for ground water pollution.

Your immediate response to this request will be appreciated.

Sincerely,

Wayne S. Thomas
